

Neurocare Sleep Management Portal - Physician Portal

The Neurocare Sleep Management Portal is a custom portal designed to provide our clients with important patient information. With access to the portal, referring providers are able to view the status of their patient's progress from receipt of referral through study interpretation, allowing easy management of patients through the sleep study process.

In particular, the following information will be available for each patient referred for a sleep study:

- Scheduling status
- Sleep study appointment date
- Type of study ordered and performed
- Interpretations will no longer be faxed and will now be available to view, print or download (unless already available through a hospital electronic medical record).

NeuroCare Welcome to the Neurocare Sleep Study Management Platform
